Overview

The widespread availability of generative artificial intelligence (GenAI) software such as ChatGPT, which generate new content based on user prompts, has caused much discussion in the education sphere, and in society in general. On the one hand, the academic integrity of assessment tasks is forcing a major rethink on assessment design, as these tools can generate texts, code and multimedia output which can be of a very high quality. On the other hand, the purpose and open use of these tools can also have many positives, leading to new ways to approach learning, teaching and assessment, and productivity gains in a wide range of fields.

Importance of digital literacy in the 21st century

1. **Technological Skills**: Knowing how to operate digital devices, use software, or navigate the internet.
2. **Digital Citizenship**: Understanding the ethical use of technology, including issues like cybersecurity, privacy, and the responsible use of social media.
3. **Digital Communication**: The ability to communicate and collaborate using digital tools and platforms.
4. **Digital Content Creation**: Crafting presentations, videos, graphics, or even software applications.
5. **Critical Evaluation**: The capability to critically assess digital content, discerning between reliable sources and misinformation.

Understanding the importance of originality

Originality is sign of integrity: When we create something new, we are taking responsibility for our work and our ideas.

Originality is important for recognition: When we create something new and unique, it is more likely to get noticed and appreciated.

Originality is essential for creativity: When we create something new, we are building on what has come before, but we are also adding our own unique perspective and ideas.

Originality is a legal requirement: Under copyright law, original works of authorship are protected from infringement.

How to ensure originality:

1) Understand the subject matter thoroughly.
2) Use proper citation and refencing to honours other peoples' contribution and give credit where credit is due.
3) Be true to yourself and your own idea.

Guidelines for students on the use of generative AI (from AR, last updated in Apr 2024)

University guidelines

Respect your own work and the work of others:

- students are accountable for their own work; and
- the use of GenAI (if permitted) should be properly acknowledged.

Following guidelines may apply to the subject or part of the assessments in a subject

- All the work you submit for assessment should be YOUR OWN ORIGINAL work.
- Declare the use of GenAI tools and how they have been used, if any.
- Reference the AI-generated materials in accordance with accepted academic conventions (e.g. APA or MLA styles), if any.
- Students who are found to have submitted AI-generated materials as their own work or part of their work constitute an act of academic dishonesty, if any.

University guidelines

DO's

Use GenAI for brainstorming

Check for factual accuracy of AI-generated content

Use AI-generated content in conjunction with other sources to ensure your work is reliable and well-informed

Include any GenAI assistance in your reference list

DON'Ts

Do NOT rely solely on AI-generated content as the source of information

Do NOT ask GenAI software to write your essays

Do NOT input any personal details or confidential information when using GenAI tools

Guidelines for Students on the Use of Generative Artificial Intelligence
(Effective from 2022/23 Summer Term)

Optional use of GenAI in Assessment (applicable to AAE only)

How to declare the use of the GenAI tool for improving readability and language?

Here are the examples from the students.

Students should clearly state:

- Use GenAI for brainstorming
- Use GenAI for proofreading

Declaration of Generative AI and AI-assisted technologies in the writing process: During the preparation of this work, the authors used Chat-GPT version 3.5 to improve realdbility and language only. After using this service, the authors reviewed and edited the content as needed and took full reposbility for the content of the publication.

2

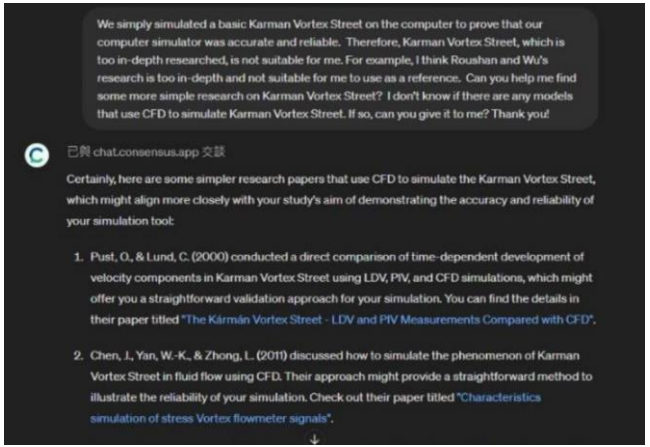

We declare that Generative AI tools have been used to prepare the submitted work. The Generative AI tools used and the manner in which they were used are as follows:

Tool	**Manner of usage**
ChatGPT by OpenAI	Used to generate text from ideas given as a prompt. The generated text is used for writing organization and is subsequently reviewed and modified to reflect the true ideas of the authors.

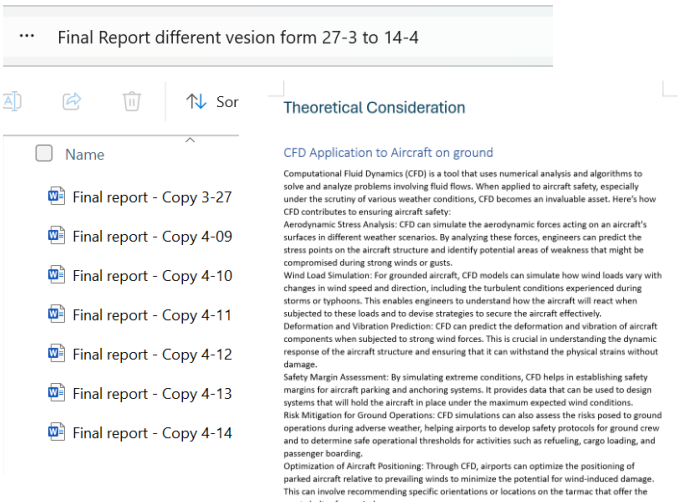

Optional use of GenAI in Assessment (applicable to AAE only)

Keep all the tracks (original copy) before using the GenAI tool for proofreading or polishing the work.

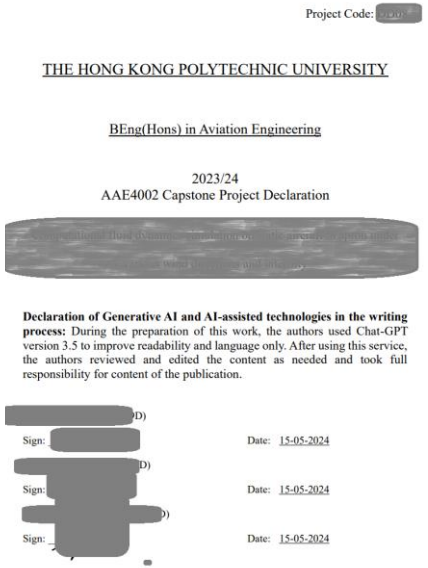

Example: (The following students achieved a high percentage of AI similarity, but they can justify the originality of the work).

Students kept the record using ChatGPT

Students kept their original works before proofreading and polishing

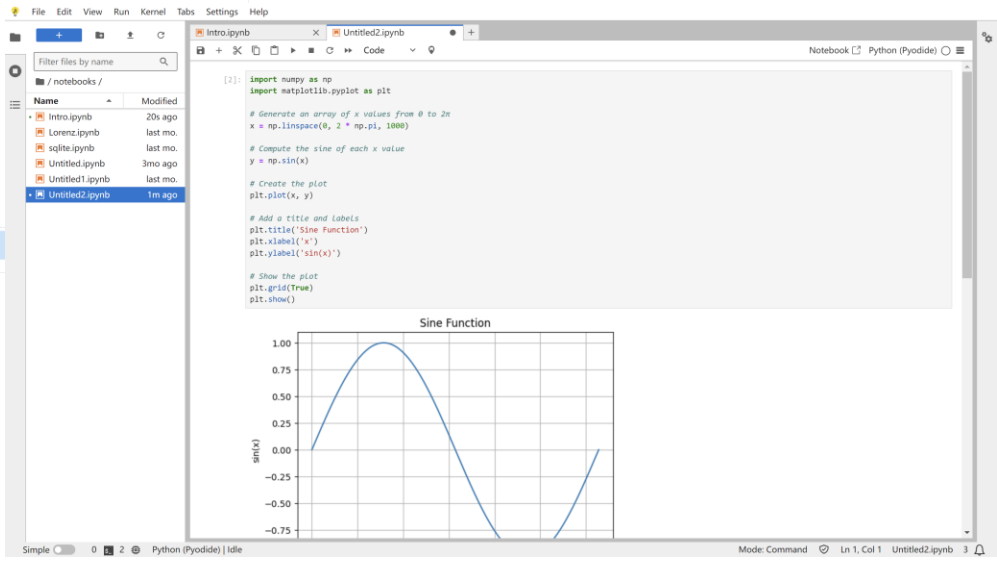

Declaration

Use the GENAI for coding!

Step 2: test and debug the code with Jupyter in Chrome.

https://jupyter.org/try-jupyter/lab/

Step 1: Generate the code with PolyU GENAI tools.

GenAI is a great tool to master, but one should not be mastered by GenAI.
